Anthony James Perez

Junior Software Developer | Full Stack Web Developer | CS Student @ UTA

SKILLS

Languages: PHP, JavaScript, Java, C, Python (basic), HTML, SQL

Tools/Tech: Git, Linux, SQLite, MySQL, WordPress, Mailgun, Stripe API, REST APIs, noc.org

Frameworks: Beaver Builder, WordPress, AI-assisted tools (ChatGPT, Copilot)

DevOps/CDN: Self-managed VPS, noc.org (WAF, CDN), Mailgun, Stripe

EXPERIENCE

CleanBrowsing.org – Junior Software Developer

April 2024 – PRESENT

- Integrated a new UI/UX design into the existing **DNSArchive** platform, revamping the frontend and dashboard experience
- Implemented core backend features including **user authentication**, **email verification** (via Mailgun), **Stripe subscription billing**, and **API key integration**
- Migrated the entire **noc.org** site to a modern, mobile-friendly layout using a new design system
- Developed internal tools for **dnsblacklist.org**, including custom search utilities and admin interfaces to improve workflow
- Collaborated directly with the founding team on architecture decisions and continue to maintain and expand platform functionality

EDUCATION

Brock High School, Texas – Diploma

August 2021 – May 2024, Brock

- Graduated in top 25%
- 2× State Finalist in Java Programming; placed 2nd in statewide competition

University of Texas Arlington , Texas – *Bachelors of Computer Science*

August 2024 – Present

Currently half way through my degree, sitting at around 60 credits and am really enjoying the school.

PROJECTS

CompTracker – *Founder & Developer | Ongoing*

- Designed and built a tool for Olympic weightlifters to track meet data, analyze progress, and visualize performance
- Built custom scraper, database backend (SQLite), and integrated user auth
- Partnering with CleanBrowsing to evolve the project into a full coaching platform

Client Websites – *Freelance Developer*

- Built and deployed 3 business websites using WordPress, Beaver Builder, and custom hosting (noc.org CDN/WAF stack)
- Most recent client site built fully from scratch using HTML/CSS/JS and AI assistance (ChatGPT, Copilot)
